**INDICATIONS FOR PREVNAR 13**

A: If you're 50 or older, consider doing something to help prevent pneumococcal pneumonia. Talk to your doctor about pneumococcal pneumonia, especially if you have a reduced immune response or have a history of severe pneumonia. Your doctor can decide if Prevnar 13 is right for you.

Q: Is there anything I can do to prevent it?

A: If you're 50 or older, vaccination is a way to help protect against pneumococcal pneumonia. If you're younger, ask your health care provider about the risks and benefits of Prevnar 13.

Q: What is pneumococcal pneumonia?

A: Pneumococcal pneumonia is serious. Its symptoms can be severe, appear quickly, and can last for weeks or longer. Pneumococcal pneumonia puts as many as 8,000 healthy people in the hospital each year.

Q: Can I prevent pneumococcal pneumonia?

A: Yes, vaccination is your best protection. The most commonly reported serious adverse events reported in clinical trials were injection site reactions such as redness, swelling, pain at the injection site, and local pain (in adults). Some people had systemic side effects, including fever, fatigue, headache, muscle pain, joint pain, nausea, vomiting, or diarrhea.

Q: Are there side effects?

A: Yes, the most commonly reported side effects were redness, or swelling at the injection site, and local pain (in adults). Some people had systemic side effects, including fever, headache, muscle pain, joint pain, nausea, vomiting, or diarrhea.

INDICATIONS FOR PREVNAR 13®

- Pneumococcal disease in adults.

For children 6 weeks through 17 years of age, PREVNAR 13 is approved for the prevention of 13 pneumococcal polysaccharide vaccine serotypes (1, 3, 4, 5, 6A, 6B, 7F, 9V, 14, 18C, 19F, 23F, and 33F) that cause invasive disease and nasopharyngeal colonization in the pediatric population.

For adults 50 years of age and older, PREVNAR 13 is approved for the prevention of pneumococcal pneumonia and for adults 50 years of age and older for the prevention of invasive disease caused by 13 pneumococcal vaccine serotypes (1, 3, 4, 5, 6A, 6B, 7F, 9V, 14, 18C, 19F, 23F, and 33F).

PREVNAR 13 is a vaccine approved for adults 50 years of age and older for the prevention of pneumococcal pneumonia and invasive disease caused by 13 pneumococcal vaccine serotypes (1, 3, 4, 5, 6A, 6B, 7F, 9V, 14, 18C, 19F, 23F, and 33F).

**IMPORTANT SAFETY INFORMATION**

- PREVNAR 13 should not be given to anyone with a severe allergic reaction to any component of PREVNAR 13 or to anyone with a history of severe allergic reaction to a component of PREVNAR 13.

- PREVNAR 13 should not be given to anyone with a severe allergic reaction to any component of PREVNAR 13.

- PREVNAR 13 is not 100% effective and will only help protect against the 13 strains included in the vaccine.

- PREVNAR 13 may not provide full protection against pneumococcal disease and becomes more common beginning in middle age. Prevnar 13 is not approved for use in children under 6 months of age.

- PREVNAR 13 is not a substitute for seasonal flu vaccine.

For more information, please see the Patient Information Leaflet which is available at www.PREVNAR13.com or call 1-800-822-7967.
